

Supplemental figure 2: Apple gene predictions found in the QTL interval for flavanol concentration. The figure is set as a set of GBrowser tracks showing the position on the LG (top track), close up position (second and third tracks), apple genome assembly contigs (fourth track), IASMA predicted apple gene set and apple cDNA sequences (fifth track; *Malus* Bioview™) mapping to the region (positioned using GMAP). Gene names are indicated where known.

Transmembrane protein

alpha/beta hydrolase

LRR receptor-like
serine/threonine-
protein kinase

NaMN
adenylyltransferase

Elongator complex
protein 2

LRR receptor-like
serine/threonine-protein
kinase

hypothetical protein

lipid-transfer protein
AKCS9

hypothetical protein

Protein lyl-1

Overview

Region

Details

Polygalacturonase

C2H2 Transcription
Factor Family

Chaperone
protein dnaJ

Monoglyceride lipase

Regulator of Vps4
activity in the MVB
pathway

Monoglyceride lipase (MGL)

50S ribosomal protein

Transmembrane protein

Protein FAM55D,

RuBisCO small subunit

Tubulin alpha-2 chain

Assembly Contig
MDC010344_263

IASMA Predicted Gene Set (V1)

Malus BioView Database Sequence

LOB domain
protein 40 – a TF

Homocysteine
S-methyltransferase

3-ketoacyl-CoA
synthase 6 (KCS-6)

Zinc finger protein
CONSTANS-LIKE 6

Glutathione S-transferase 6

Peptide transporter PTR1

Dihydrolipoyllysine-residue
acetyltransferase

tRNA

Lysine
transporter

RNA
pol
